1. From the Control4 app tap the lighting icon. To watch a short video on lighting scenes, click [here](#).

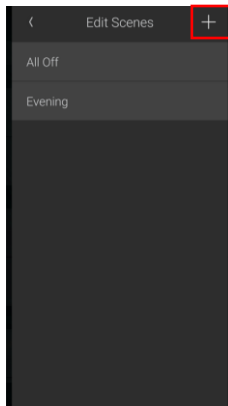

2. Tap scenes.

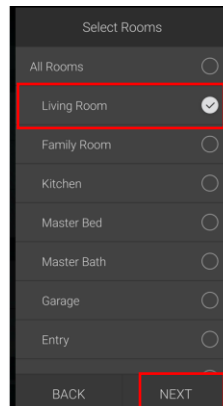

3. Tap the pencil icon in the top right corner.

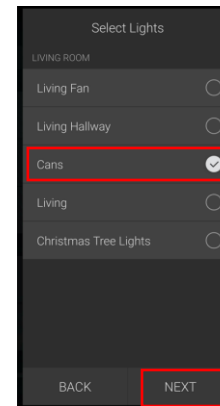

4. Tap the plus icon in the upper right corner to create a new lighting scene.

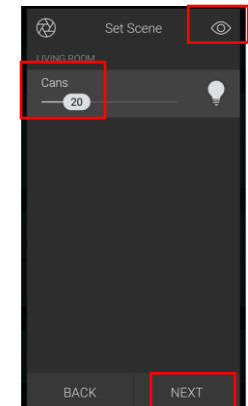

5. Choose the rooms you would like your new lighting scene to be in and tap next.

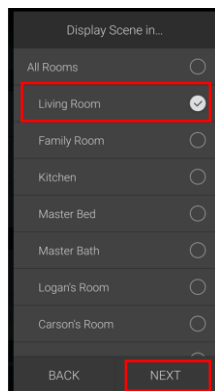

6. Select the lights you would like to control with the new lighting scene and tap next.

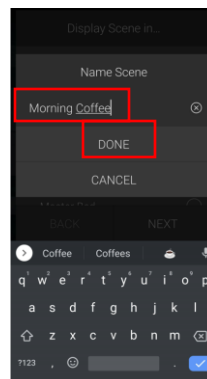

7. Slide the lighting level to your preferred brightness and tap the eye icon in the upper right corner to activate the scene so you can verify the level is what you want to happen. Tap next.

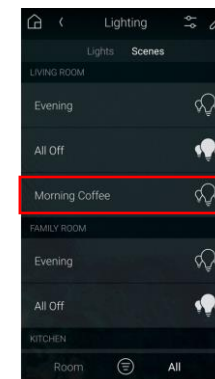

8. Choose the rooms you would like this lighting scene to be displayed in and tap next.

9. Type in a name for your newly created lighting scene and tap done.

10. Your new scene is created and ready for use. Simply tap the light icon to turn your scene on and off. Press and hold to delete, rename or favorite to the room.

11. Your dealer can also add your lighting scenes to custom buttons on the remote control, keypad buttons and light switches for you.
